Releaf

AI-assisted operations for small businesses

- Inventory
- Orders
- Meeting tasks

SDC Hackathon 2026

Working local prototype
Synthetic demonstration data

Daily work across disconnected tools

Demo scenario: a small bakery with a central kitchen and retail outlets

What is in stock?
What did the customer order?
Who will follow up?

Releaf brings these activities into one workspace with traceable records.

Stock in spreadsheets

Manual updates make restocking decisions harder.

Orders in chat messages

Staff re-enter details and can miss delivery instructions.

Actions in meeting summaries

Commitments lack a consistent place for follow-up.

Initial users: bakeries and food businesses. Adjacent use cases: retailers, e-commerce and small warehouses.

Inventory approval and stock posting

Separate requests and approvals from actual stock movements

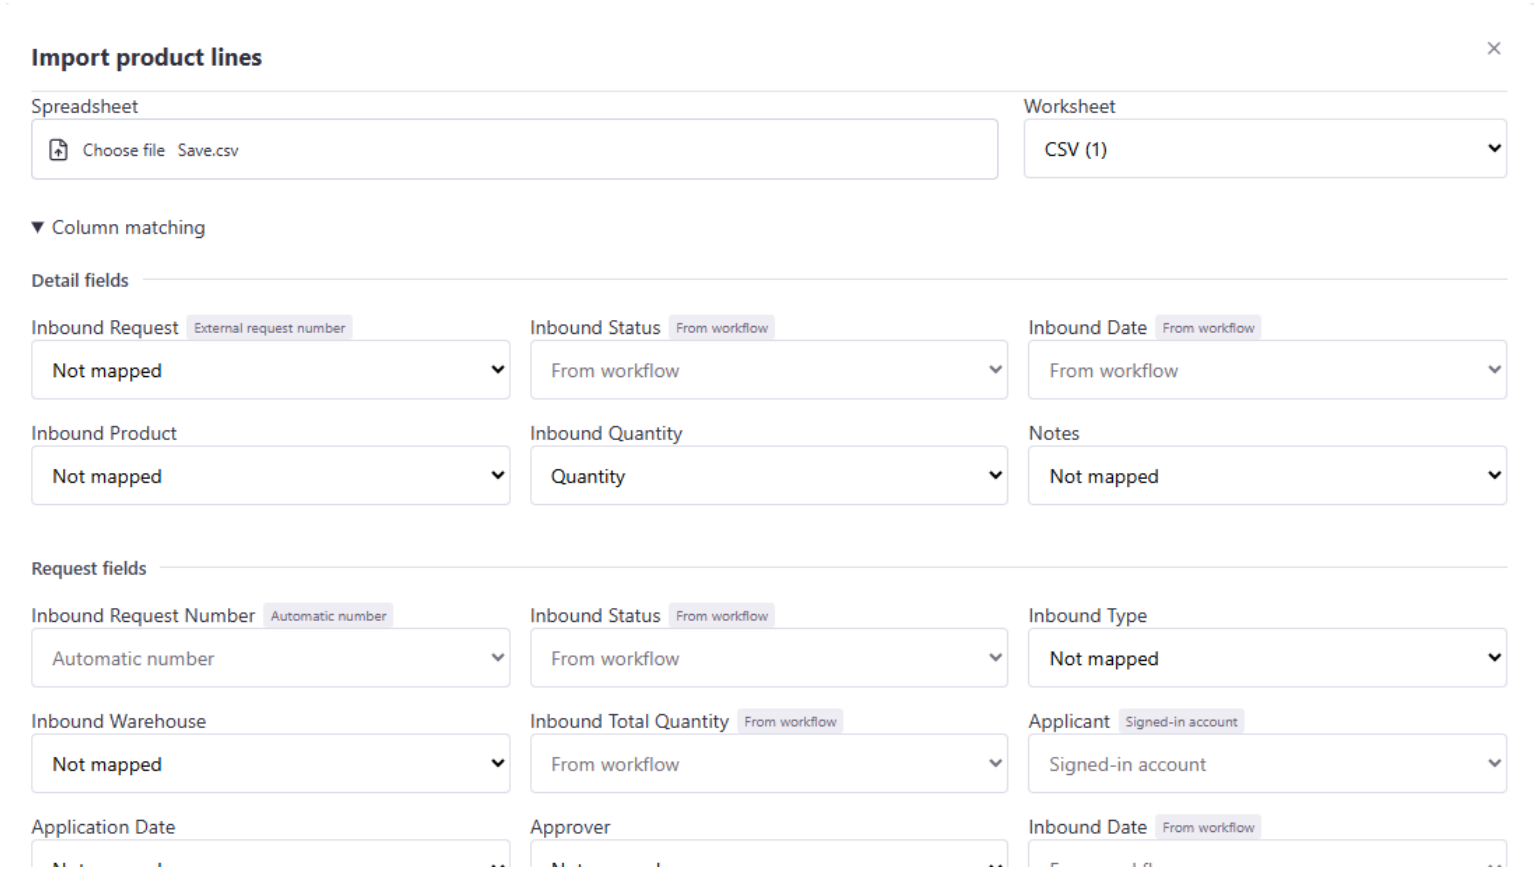

01	02	03	04	05
Draft	**Submit**	**Approve**	**Post**	**Ledger**
Warehouse, product and quantity	Assigned approver receives the request	The named approver accepts or rejects	Stock changes in one transaction	Movement history supports traceability

Inbound adds stock. Outbound deducts stock.

Insufficient stock blocks outbound posting. Guarded reversals preserve movement history.

Spreadsheet import

Product lines enter a draft request through mapping and preview

XLSX or UTF-8 CSV

1 Match columns

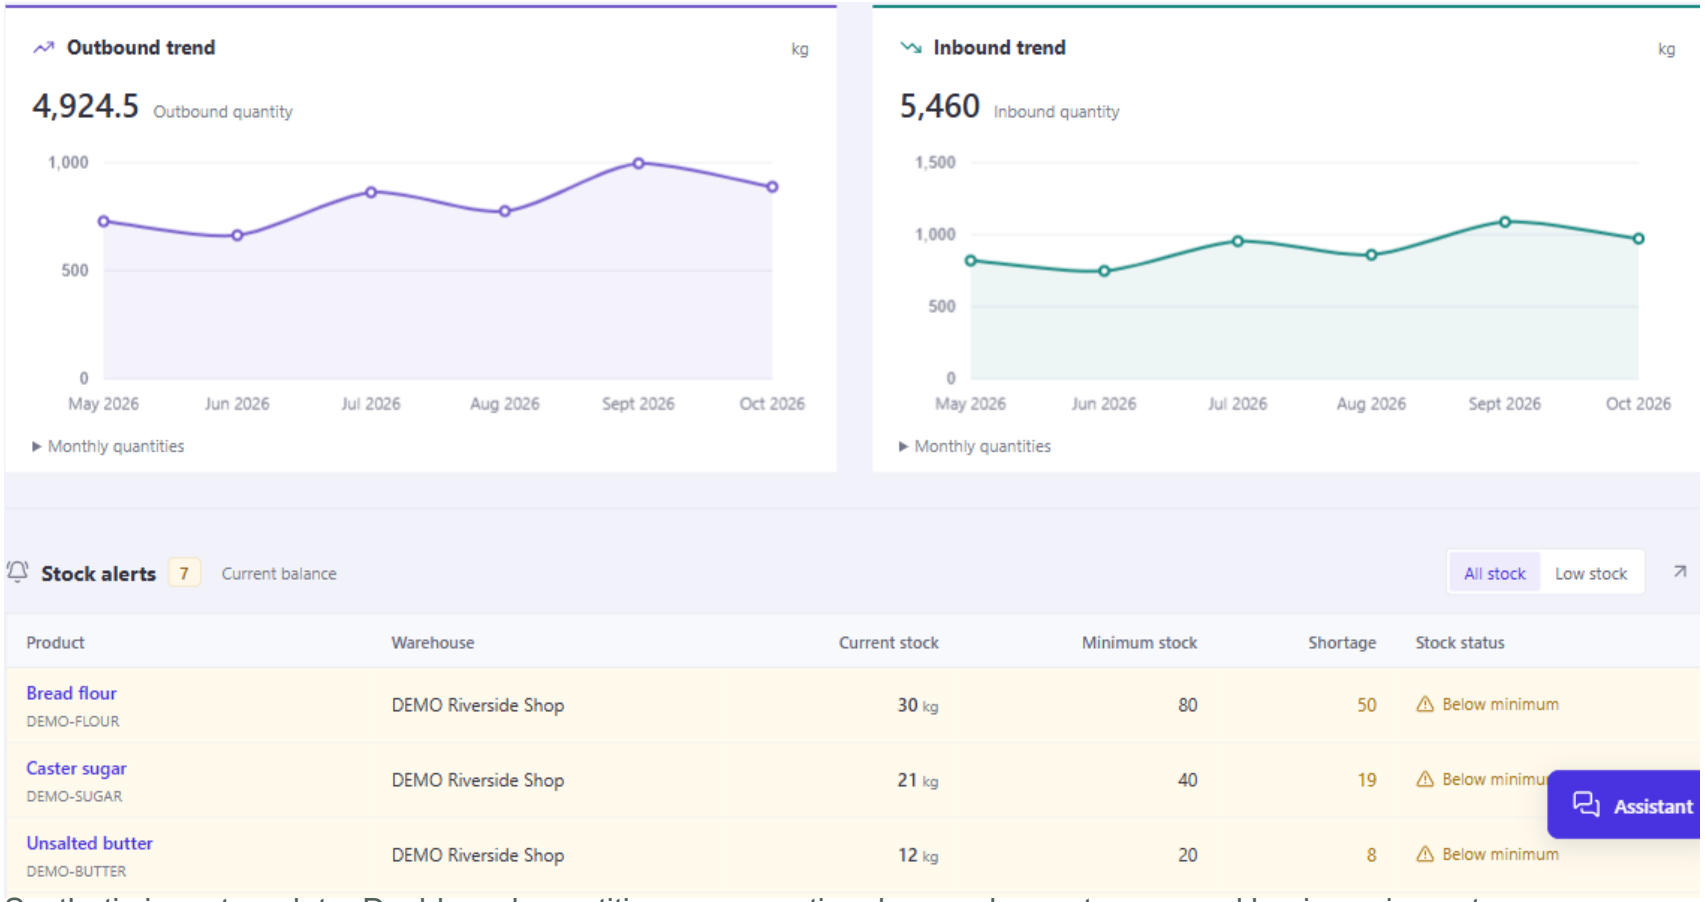

Resolve product codes and quantities.

2 Preview and import

Keep the request as a draft. Approval and posting still apply.

Inventory visibility and restocking

Ledger-based trends, current balances and low-stock alerts

Synthetic inventory data. Dashboard quantities are operational examples, not measured business impact.

Unit-safe analysis

Filter by warehouse, product and unit.

Restocking cues

Track monthly flows and items below minimum stock.

Custom fields and administrator controls

Administrators extend product and warehouse tables while core rules remain protected

Table	Example custom field	Synthetic value
Products	Storage instructions	Keep chilled
Warehouses	Receiving hours	08:00-16:00

Administrator

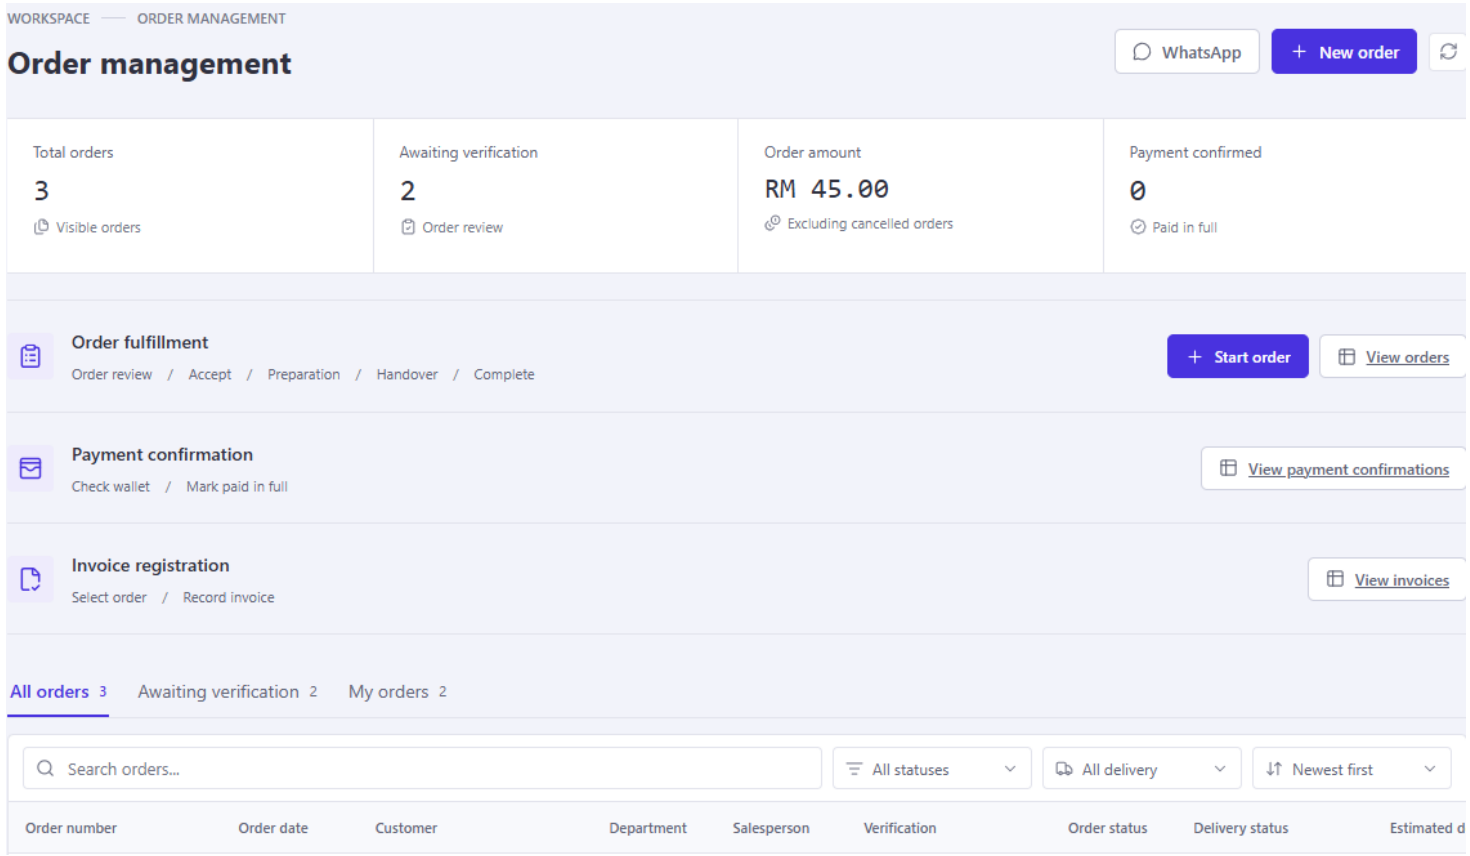

Add, rename or remove custom fields.
Maintain products and warehouses.

Member

Read shared data and use request workflows.
Approve only when assigned.

Order intake and human review

AI extracts a draft. Staff verify details, enter amounts and manage fulfillment.

Selected chat or pasted text

The optional local WhatsApp bridge reads an explicitly selected chat.

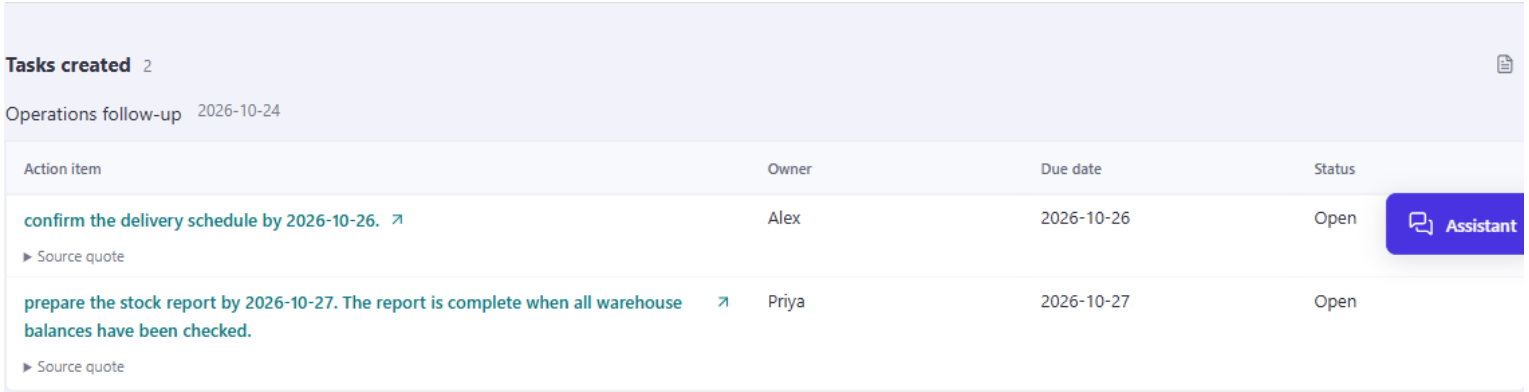

Human financial checks

Review the order and enter MYR. Confirm actual receipt manually. Register an existing invoice.

Orders do not deduct inventory. The bridge does not send messages or verify payments.

Meeting summaries and follow-up tasks

Releaf complements Orbyte's Meeting Summary through a text or file handoff

"Alex will confirm the delivery schedule by 2026-10-26."

Each task retains its source quote for checking.

Summary input Paste text or import TXT / Markdown

Extract and create

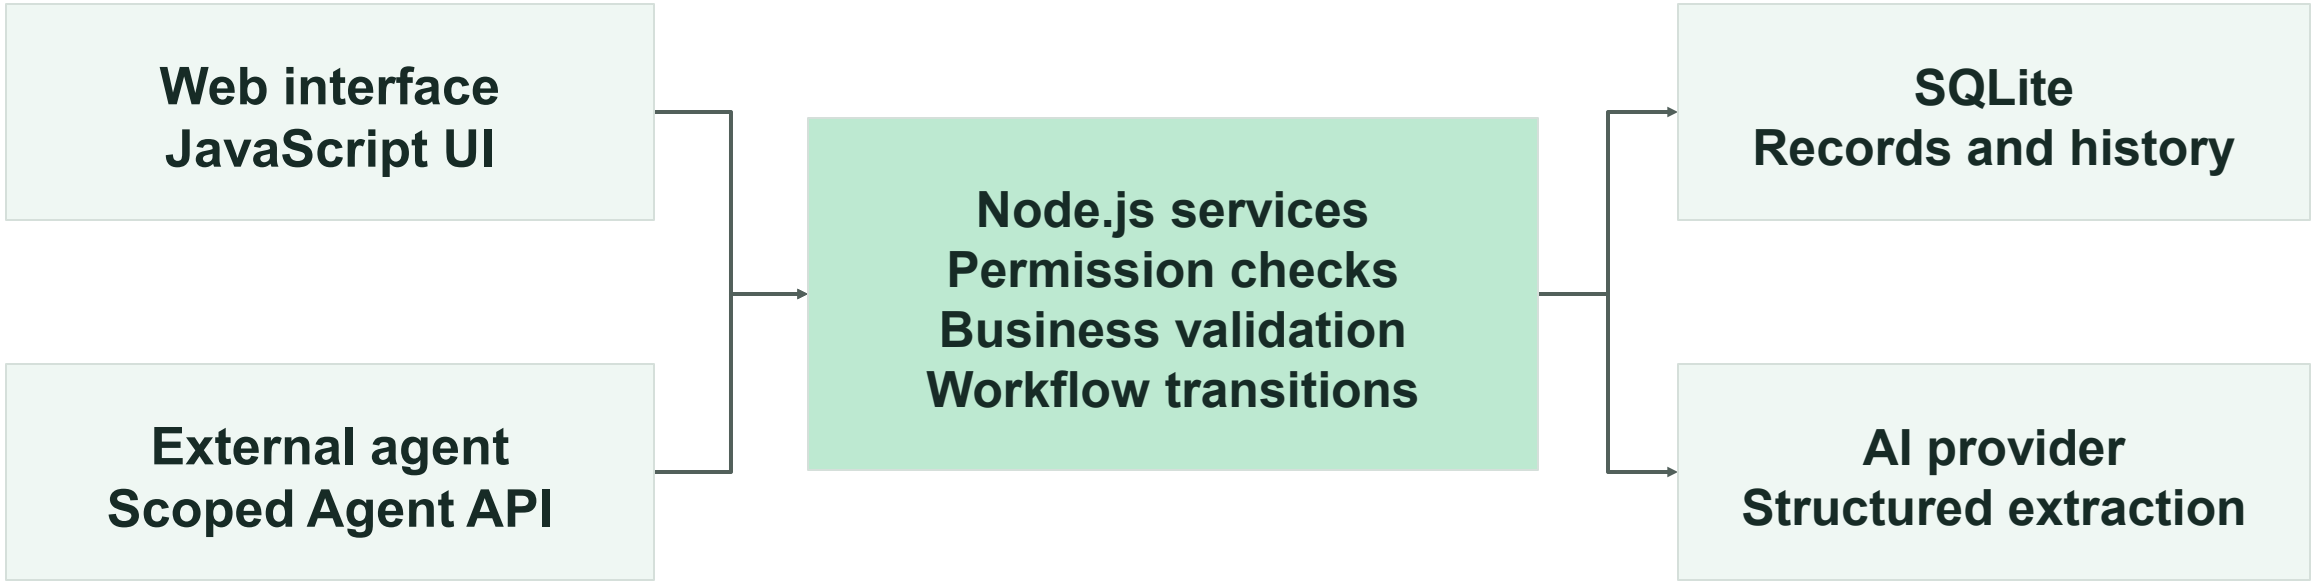

Task and owner
Due date and status
Acceptance criteria
Exact source quote

Review after creation

Direct Orbyte API integration remains a future direction.

Technical approach

AI handles unstructured text. Deterministic services control business changes.

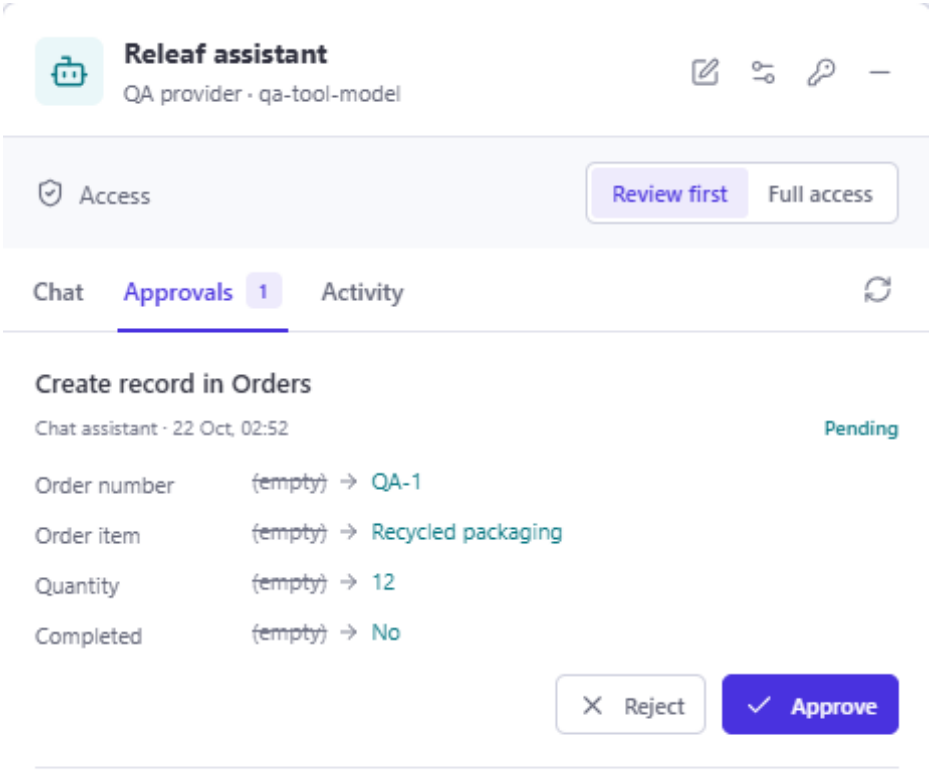

Shared rules

Typed AI output validation, transactions, version checks and operation history

Agent API: 64 defined operations

External agents use the same permission checks and workflow rules as the web UI

Available today

Tables, schemas and record CRUD
Inventory workflows and dashboard
Spreadsheet and attachment imports
Orders, payment and invoice records
Selected-chat WhatsApp order intake
AI tasks, notifications and navigation

Controlled writes

Review first by default. Owner and Space limits.
Idempotency keys protect retried writes.

Current results and expected impact

The prototype demonstrates workflows. A real business pilot must establish impact.

Implemented

Inventory approval, posting and dashboard
Spreadsheet import and custom fields
Order review, payment and invoice records
Meeting-to-task extraction
Shared web and Agent business operations

Expected, not yet measured

Expected benefit	Pilot measure
Less repeated entry	Minutes per transaction
Clearer follow-up	Tasks completed on time
Less excess food stock	Ingredient waste in kg

Sustainability hypothesis: better stock visibility could reduce avoidable over-ordering and ingredient waste.

Future direction

Next milestone: complete API business logic and workflow coverage

01	**Complete API logic**	Extend end-to-end business coverage, including meeting-task operations.
02	**Consistent contracts**	Standardize schemas and errors. Test permissions, retries and failed workflows.
03	**External integrations**	Use completed APIs for external agents and a future direct Orbyte handoff.

Releaf AI-assisted operations with human accountability

Agent tools: data and navigation

17 operations on this page. Access follows account role and token Space.

Tables and records (12)

Schemas, queries and controlled record writes

01 list_forms
02 list_spaces
03 get_form
04 query_records
05 get_record
06 create_record
07 update_record
08 delete_record
09 create_form
10 update_form
11 preview_form_deletion
12 delete_form

Navigation (5)

Space display nodes and tree structure

13 list_navigation
14 create_navigation_node
15 update_navigation_node
16 move_navigation_node
17 delete_navigation_node

64 operations across 10 families

Discovery: GET /api/agent/tools
Call: POST /api/agent/operations
Tool operations share one execution route.

Agent tools: inventory and imports

15 operations on this page. Access follows account role and token Space.

Inventory (8)

Catalog, requests, posting and stock reports

18 save_inventory_catalog
19 setup_inventory_workspace
20 get_inventory_workspace
21 get_inventory_dashboard
22 get_inventory_request
23 create_inventory_request
24 update_inventory_request
25 advance_inventory_request

Spreadsheet import (5)

Upload, match, preview and execute

26 upload_inventory_file
27 get_inventory_file
28 match_inventory_file
29 preview_inventory_import
30 execute_inventory_import

Attachments (2)

Upload and read supported files

31 upload_attachment
32 get_attachment

Agent tools: orders and WhatsApp

13 operations on this page. Access follows account role and token Space.

Orders (9)

Intake, review and fulfillment operations

33 list_orders
34 get_order
35 parse_customer_order
36 create_order
37 update_order
38 transition_order
39 confirm_order_payment
40 record_order_invoice
41 prepare_order_notification

WhatsApp order intake (4)

Explicitly selected chat, bounded read range

42 get_whatsapp_status
43 list_whatsapp_chats
44 preview_whatsapp_import
45 import_whatsapp_orders

Optional local read-only bridge

Administrator access only.
No message sending or payment verification.

Staff verify actual payments and register existing invoices. Orders do not deduct inventory.

Agent tools: AI and notifications

19 operations on this page. Access follows account role and token Space.

AI tasks and runs (11)

Configure, run, review and apply AI output

46 create_ai_task
47 update_ai_task
48 delete_ai_task
49 list_ai_tasks
50 start_ai_task
51 list_ai_runs
52 get_ai_run
53 preview_ai_run
54 apply_ai_run
55 retry_ai_run
56 cancel_ai_run

Notifications and rules (6)

Notifications and same-form rules

57 list_notifications
58 mark_notification_read
59 list_notification_rules
60 create_notification_rule
61 update_notification_rule
62 delete_notification_rule

Error Center (2)

Find errors and update resolution status

63 list_errors
64 resolve_error
